Reporting to: Team Lead/Tech Lead

Division/Department: Information Technology

Location: Mumbai (HO)

Experience: 4-5 years

Education: BSc.IT/Computer Science / BE- Computers / BCA/MCA

Language: English

General Description

We are seeking a DevOps Engineer with 4-5 years of experience to join our growing team and play a pivotal role in managing our micro services based SaaS application. The Person will be responsible for ensuring the stability, scalability, and security of our infrastructure while collaborating closely with our development team to implement CI/CD pipelines and automate deployments.

Competencies required

Mandatory:
1. Proven experience with AWS: EKS, ECR, Route 53, S3, and RDS.
2. Familiarity with Infrastructure as Code (IaC) tools like AWS CDK8s and CloudFormation.
3. Experience with GitLab server administration and CI/CD pipelines.
4. Strong understanding of Linux, scripting languages like Bash.
5. Excellent debugging, troubleshooting, problem-solving skills.

Good to have:
1. Experience with AWS services like CloudWatch, EC2, and ALB.
2. Experience with infrastructure automation tools like Terraform or Ansible.

Behavioral Competencies:
1. Execution Excellence
2. Communication Skills (Written & Verbal)

Job Responsibilities:
1. Troubleshooting and resolving issues related to application development, deployment, and operations.
2. Implementing and maintaining version control systems, configuration management tools, and other DevOps-related technologies.
3. Designing and implementing automation tools and frameworks for continuous integration, delivery, and deployment.
4. Ensuring compliance with industry best practices and organizational policies.
5. Collaborating with Dev, QA and other teams to debug/resolve deployment/performance related issues.
